

PermaBerm™

Secondary Containment Foam Wall Berm

PPC Containment Systems introduces PermaBerm™, a foam wall berm so incredibly durable it long outlasts traditional polyethylene or fabric.

70 MILS OF BERM PROTECTION

We start with geotextile fabric over a foam wall berm and encase it with PermaLiner*, an advanced polymer-based coating currently used for spray-on truck bed liners. The result is 70 mils of indestructible protection compared to 30 mils with conventional berm containments.

*PermaLiner is a 100% solids polyurea coating.

PERMABERM VS. POLYETHYLENE/FABRIC BERMS

- PermaBerm will not tear.
- PermaBerm will not puncture.
- PermaBerm is safe, not slippery.
- PermaBerm can be deployed on sharp rocks or harsh terrain. PermaBerm is impenetrable, eliminating tears and punctures. Avoid repairs and eliminate down time.
- Drive trucks, fork-lifts, or trailers over PermaBerm – It bounces back. Vehicles can load/unload all day.
- PermaBerm's anti-skid surface prevents slips and injury.
- While indestructible, PermaBerm is simple to open, fold up or re-deploy.
- PermaBerm keeps your operation compliant with Federal and State regulations.
- Highlight your company at the worksite – PermaBerm is available in company colors. You can also display your logo.
